Materials

* <https://github.com/fpmpoles/talks-spring-swagger>

Who am I

- * Software Architect with Garmin International
- * LinkedIn Learning/lynda.com content author
- * 15+ years of experience in all aspects of SDLC
- * Spring 3.2 & 4.0 certified Spring Professional
- * Co founder of local Java User Group & Spring User Group

Agenda

- * Why
- * How
- * Thoughts

Why?

Few Questions

- * Who currently documents their APIs? (not talking about JavaDoc)
- * Who enjoys it?
- * If you are left, do you use Swagger?

Consumption

- * Consumption of web services relies on contracts
- * Contracts must be documented
- * We don't have WSDL anymore... (not complaining)

Is it dead yet?

- * Traditional documentation dies the moments it is written
- * To truly be alive, it must live with the source
- * Swagger provides this

How?

Thoughts

Thoughts on building it

- * Add swagger ui to every project
- * Leverage common URLs -> even better with service registry
- * Don't skimp
- * Be uniform

Questions???
